PYTHON–MYSQL CONNECTIVITY
QUESTION BANK
Class XII – Computer Science (083)

1. 2025 Sample Question Paper

A table, named STATIONERY, in ITEMDB database, has the following structure:

Field	Type
itemNo	int(11)
itemName	varchar(15)
price	float
qty	int(11)

Write the following Python function to perform the specified operation:

AddAndDisplay(): To input details of an item and store it in the table STATIONERY. The function should then retrieve and display all records from the STATIONERY table where the Price is greater than 120.

Assume the following for Python-Database connectivity:
Password: Pencil
User: root
Host: localhost

2. 2025 Board Question Paper

A table, named THEATRE, in CINEMA database, has the following structure:

Field	Type
Th_ID	char(5)
Name	varchar(15)
City	varchar(15)
Location	varchar(15)
Seats	int

Write a function Delete_Theatre(), to input the value of Th_ID from the user and permanently delete the corresponding record from the table.

Assume the following for Python-Database connectivity:
Password: Ex2025
User: root
Host: localhost

3. 2025 Compartment Question Paper

Nutan Kumar is using Python connectivity with MySQL for maintaining data for a table named MEDICINES in a database PHARMACY. The table has the following attributes:

Field	Type
MId	Medicine number – string
Mname	Medicine Name – string
Expiry	Expiry Date – Date
Status	Active/Discard – string

Consider the following to establish connectivity between Python and MySQL:

Help Nutan to write the definition of a user-defined function named ChangeStatus() in Python to change the Status of the Medicines whose Expiry is before '2022-12-31' as 'DISCARD'.

Host: localhost
Password: tiger
Username: root

4. 2026 Sample Question Paper

MySQL database named WarehouseDB has a product_inventory table in MySQL which contains the following attributes:

Field	Type
Item_code	Item code (Integer)
Product_name	Name of product (String)
Quantity	Quantity of product (Integer)
Cost	Cost of product (Integer)

Consider the following details to establish Python-MySQL connectivity:

Write a Python program to change the Quantity of the product to 91 whose Item_code is 208 in the product_inventory table.

Host: localhost
Password: warehouse2024
Username: admin_user

5. 2026 Board Question Paper

Peter has created a table named Account in MySQL database, SCHOOL, having following structure:

Field	Type
Stud_id	integer
Sname	string
Class	string
Fees	float

Help him in writing a Python program to display records of those students whose fees is less than 5000.

Note the following to establish connectivity between Python and MySQL:

Host: localhost
Password: root
Username: admin

6. 2026 Compartment Question Paper

A table named EQUITY in INVESTMENT database has the following structure:

Field	Type / Remarks
Code	Char(6) — Code of stock
Name	Varchar(15) — Name of stock
Exchange	Char(3) — Name of exchange
LTP	Float — Last traded Price
Volume	int — Amount of stock

Write a function in Python to display all the records where Exchange is BSE from the EQUITY table. Also display the total number of such records.

Assume the following for Python database connectivity:

Password: Stk2026
User: Finman
Host: localhost

7. 2027 Sample Question Paper

MySQL database named LibraryDB has a table book_records which contains the following attributes:

Field	Type
Book_ID	ID of the book (Integer)
Book_Title	Title of the book (String)
Author	Author of the book (String)
Copies	Number of copies available (Integer)

Consider the following details to establish Python-MySQL connectivity:

Write a Python-MySQL program to change the Book_Title to 'Data Structures in Python' for the record whose Book_ID is 109 in the book_records table.

Host: localhost
Password: lib@2025
Username: librarian

8. 2024 Sample Question Paper – Part A

Kabir wants to write a program in Python to insert the following record in the table named Student in MYSQL database, SCHOOL:

Field	Type / Description
rno	Roll number – integer
name	Name – string
DOB	Date of birth – Date
Fee	Fee – float

The values of fields rno, name, DOB and fee have to be accepted from the user. Help Kabir to write the program in Python.

Username: root
Password: tiger
Host: localhost

9. 2024 Sample Question Paper – Part B

Sartaj has created a table named Student in MYSQL database, SCHOOL:

Field	Type / Description
rno	Roll number – integer
name	Name – string
DOB	Date of birth – Date
Fee	Fee – float

Sartaj now wants to display the records of students whose fee is more than 5000. Help Sartaj to write the program in Python.

Username: root
Password: tiger
Host: localhost

10. 2024 Board Question Paper – Part A

Sunil wants to write a program in Python to update the quantity to 20 of the records whose item code is 111 in the table named shop in MySQL database, Shopping. The table shop in MySQL contains the following attributes:

Field	Type / Description
Item_code	Item code (Integer)
Item_name	Name of item (String)
Qty	Quantity of Item (Integer)
Price	Price of item (Integer)

Write the Python program for the above-mentioned task.

Username: admin
Password: Shopping
Host: localhost

11. 2024 Board Question Paper – Part B

Sumit wants to write a code in Python to display all the details of the passengers from the table Flight in MySQL database, Travel. The table contains the following attributes:

Field	Type / Description
F_code	Flight code (String)
F_name	Name of flight (String)
Source	Departure city of flight (String)
Destination	Destination city of flight (String)

Write the Python program to display all the details of the passengers from the Flight table.

Username: root
Password: airplane
Host: localhost

12. 2024 Compartment Question Paper – Part A

Sangeeta wants to write a program in Python to delete the record of a candidate “Raman” from the table named Placement in MySQL database, Agency. The table Placement in MySQL contains the following attributes:

Field	Type / Description
CName	String
Dept	String
Place	String
Salary	integer

Help Sangeeta to write the program in Python for the above-mentioned task.

Username: root
Password: job
Host: localhost

13. 2024 Compartment Question Paper – Part B

Rahim wants to write a program in Python to insert a record in the table named Bank_Account in MySQL database, Bank. The table contains the following attributes:

Field	Type / Description
Accno	integer
Cname	string
Atype	string
Amount	float

The values of fields Accno, Cname, Atype and Amount have to be accepted from the user. Help Rahim to write the program in Python.

Username: admin
Password: root
Host: localhost
