# STANES SCHOOL

## ANSWER KEY – CLASS XII INFORMATICS PRACTICES

## UNIT TEST – 1 (2026–2027)

### SECTION A – ANSWER KEY

1. False

2. b) A row in a table

3. a) Data Definition Language

4. b) DROP

5. d) LIST

6. b) The set of allowed values for that column

7. True

8. c) WHERE

9. d) !=

10. b) DISTINCT

11. b) ALTER TABLE ... ADD

12. d) WITH

13. a) Checks if a value is within a range

14. a) Both A and R are True and R is the correct explanation

15. b) CREATE DATABASE

16. False

17. c) VARCHAR

### SECTION B – ANSWER KEY

**18A.** DBMS Definition + Advantages

DBMS is software used to store, manage and retrieve data efficiently.

Advantages (any two): – Reduces redundancy – Ensures security – Allows data sharing – Maintains integrity

**18B.** DDL vs DML

DDL: Defines structure (Example: CREATE TABLE)

DML: Manipulates data (Example: INSERT)

**19.**

I. SELECT EmpName FROM Employee WHERE Department='IT';

II. SELECT EmpID, EmpName FROM Employee WHERE Salary>70000;

**20A.** Candidate Key – uniquely identifies rows (Example: RollNo)

**20B.** Primary Key vs Alternate Key

Primary Key: chosen candidate key

Alternate Key: remaining candidate keys

**21.**

I. CREATE DATABASE SchoolDB;

II. CREATE TABLE Student (RollNo INT, Name VARCHAR(30), Class INT, Marks FLOAT);

**22.**

I. Output: Keyboard, Monitor

II. Output: Monitor

## SECTION C – ANSWER KEY

**23A.**

Domain – allowed values

Tuple – row

Relation – table

**23B.** Alternate Keys are candidate keys not chosen as primary.

**24A.**

I. SELECT * FROM Library WHERE Price>400 AND Price<=550;

II. SELECT Title FROM Library WHERE Author='Rajesh';

III. SELECT * FROM Library ORDER BY Price DESC;

**24B.**

I. Output: AI Fund (550)

II. Authors: Rajesh, Priya, Amit, Neha

III. Titles: Python Basics (450), Web Dev (500), AI Fund (550)

## SECTION D – ANSWER KEY

**25.**

I. SELECT * FROM Sales WHERE Category='Electronics';

II. SELECT ProductName, Quantity FROM Sales WHERE Quantity>5;

III. SELECT * FROM Sales WHERE PricePerUnit<1000;

IV. SELECT * FROM Sales ORDER BY ProductName ASC;

**26A.**

I. CREATE DATABASE CompanyDB;

II. CREATE TABLE Employee (...);

III. ALTER TABLE Employee ADD City VARCHAR(25);

IV. ALTER TABLE Employee MODIFY Salary INT;

**26B.**

I. SELECT * FROM Employee WHERE Department IN ('IT','HR');

II. SELECT EmpName, Salary FROM Employee WHERE Salary BETWEEN 40000 AND 70000;

III. SELECT * FROM Employee WHERE EmpName LIKE 'A%';

IV. SELECT * FROM Employee ORDER BY Salary DESC;

**27.**

I. Cities: Delhi, Mumbai, Pune

II. Aarav – 85

III. Priya, Simran, Karan

IV. Aarav, Priya, Rohan

## SECTION E – ANSWER KEY

**28A.**

I. SELECT SUBSTR(ProductName,1,3) FROM Products;

II. SELECT UPPER(Name) FROM Customers;

III. SELECT Address FROM Customers;

IV. SELECT CURRENT_DATE();

V. SELECT * FROM Orders WHERE OrderDate>'2025-01-01';

**28B.**

I. SELECT * FROM Employees WHERE Department='IT' AND Salary>60000;

II. SELECT EmpName, JoinDate FROM Employees WHERE JoinDate>'2023-01-01';

III. SELECT * FROM Employees WHERE Department IN ('IT','Finance');

IV. SELECT * FROM Employees ORDER BY EmpName ASC;

V. SELECT * FROM Employees WHERE EmpName LIKE 'A%';
